Computer skills

Programming
Python, SQL, R

Machine Learning Libraries
scikit-learn, TensorFlow, PyTorch, XGBoost, Keras

Specializations
NLP, Graph ML, Explainable AI

Data & Visualization
Pandas, Polars, NumPy, Matplotlib, Seaborn, Plotly

Big Data & MLOps
Spark, Azure ML, Docker, FastAPI, Git, MLflow, Github Actions CI/CD

Dinh HA

Junior Data Scientist

Passionate about AI and exploring new countries, I moved from Vietnam to France to pursue a Master's in Machine Learning. After several research internships, I'm ready to challenge myself in the private sector. I'm now seeking a Data Scientist role. Available immediately.

Education

Master in Machine Learning & Data Mining
From Sept. 2024 to Aug. 2026 University Jean Monnet Saint-Étienne, France

Bachelor in Information Technology
From Sept. 2020 to Aug. 2024
Hanoi University of Science & Technology Hanoi, Vietnam

Work experience

Data Science Research Intern
From Feb. 2026 to July 2026
Institut de Recherche en Informatique de Toulouse Toulouse, France

- **Preprocessed clinical & transcriptomic data** from melanoma patients.
- **Built an XGBoost model** predicting patient's treatment response in ~100 patients, reaching 0.90 AUC-ROC & 0.69 F1
- **Used Explainable AI (SHAP)** to identify the key genes driving predictions, presented them to clinicians.

Data Science Research Intern
From May 2025 to Aug. 2025
Hubert Curien Laboratory Saint-Étienne, France

- **Embedded social media posts using BERT** to build text features.
- **Built a Graph Convolutional Network for stance detection** combining user-interaction graphs with text embeddings, reaching 0.71 accuracy & 0.67 F1, outperforming text-only baselines.
- **Ran a fairness analysis** showing the graph-based model reduced prediction bias compared to text-only models.

Software Engineer Intern
From July 2023 to Sept. 2023 VNPT-IT Hanoi, Vietnam

- **Integrated** self-service **library devices** with the **digital library system**
- **Developed patron authentication procedures:** check-out, check-in, renewals, and fine payments.

Personal project

End-to-End MLOps Pipeline

- **Versioned code** with Git and **datasets** with DVC.
- **Tracked every training run's** parameters and metrics in MLflow.
- **Packaged the model** in a Docker container and **deployed** it as a REST prediction API with FastAPI on Azure.
- **Automated testing, image builds and registry** via GitHub Actions CI/CD workflow.
